Organic Motion's technology essentially creates a 'digital clone' of the person being tracked – without wearing any mechanical tracking devices. By completely removing the markers, the technology does not require expensive technicians to operate the systems, or the hassle of time-intensive calibration steps. This allows students to easily step into a system and personally interact with the technology to take advantage of a completely hands-on learning environment.

"Institutions must stay competitive to attract new students, and those students must graduate with the skills necessary to excel in the extremely competitive environments of digital content creation, data visualization and motion analysis," said Christine Arrington, Senior Analyst, Acacia Research Group. "By integrating markerless motion capture, these programs can be much more efficient and effective in using motion capture as a teaching tool in content creation and visualization."

"Whether it's for the film school, research labs, or even the learning hospitals on campus, we're honored that these programs selected Organic Motion to deliver a greater learning experience," says Andrew Tschesnok, CEO Organic Motion. "By incorporating our technology, these schools are creating a more effective way of teaching, allowing students to have direct interaction with the most technologically advanced resource available."

Institutions currently using Organic Motion's STAGE and BioSTAGE

NYU Tisch School of the Arts Asia

One of the world's leading Fine Arts institutions selected Organic Motion's STAGE system to help students master digital animation and video techniques for observation, capture, analysis and visualization of motion from real-life.

Digital Worlds Institute, University of Florida

Digital Worlds (DW) is leveraging Organic Motion's technology to study how people interact in digital arenas, and to create entirely new virtual experiences. DW recently integrated the company's BioSTAGE application, to encourage collaborative research in psychology, neurology, medicine, bioengineering, sports sciences, the performing arts and rehabilitation.

Rochester Institute of Technology, Computer Graphics Design and Computer Science

RIT recently installed the STAGE system to enhance the virtual theatre experience research in cross-departmental, grant supported, research. Plans extending the use of the system into the classroom in computer graphics, computer science, medical illustration, new media, games, animation, dance, and motion graphics.

Indiana University

IU found Organic Motion's STAGE system ideal for its multidisciplinary research initiatives. Consistent with its new IT strategic plan, the university already has plans for uses in the Schools of Education; Health, Physical Education & Recreation; Communications; Informatics; Telecommunications and Fine Arts.

Marshall University, Center for Environmental, Geotechnical and Applied Sciences

Working closely with the mining industry and U.S. Mine Safety & Health Administration Academy, Marshall is developing a new generation of [mine safety training](#) technologies and is currently designing new immersive virtual reality training simulations. The new system will incorporate the Organic Motion STAGE system that will allow trainees to step in, experience and train in hazardous environments in a realistic virtual simulation, without the

risk of training in a real hazardous situation.

Tolles Career & Technical Center

Students in Tolles' computer science department are learning how to create animations for both games and short films. The high school further plans to integrate Organic Motion's BioSTAGE biomechanical analysis package, enabling students to analyze exercises and stress injuries.

Benefits to Education Institutions

Organic Motion's turnkey STAGE and BioSTAGE systems provide a number of benefits to institutions, including:

- Transforming the Teaching Experience
- Simplified Capture Process
- Multi-Discipline Applications
- Robust [Software Developer](#) Kit (SDK)
